

The 2014 winner of the Society for Leukocyte Biology G. Jeanette Thorbecke award is Dr. Stephanie Eisenbarth. Dr. Eisenbarth is currently an Assistant Professor in the Departments of Laboratory Medicine and Immunobiology at Yale University School of Medicine. Her research focuses on how the innate branch of the immune system regulates adaptive immunity in disease states such as asthma and in beneficial states such as the protective immunity generated by vaccination and spans both mouse and human studies. Her lab is currently investigating the molecular triggers and pathways that determine the migration of dendritic cells required for induction of adaptive immunity.
